

ULTRA FRESH

Ultra Fresh UV Sanitation System

An environmentally friendly alternative that will ensure your pool is clear of harmful parasites. This system is low maintenance and very safe. UV also minimizes the need to generate, handle, transport, or store dangerous chemicals on-site.

- **How does it work?** Spectra Light bombards the passing water flow with a high intensity ultraviolet ray. The UV light is contained and doesn't leave the chamber, making it very secure and safe. UV never enters the swimming pool, plus no harmful chemicals are added to the water.
- **Save Money.** Our Ultra Fresh UV System will save you money in the long run as less chemicals are needed to keep your pool water balanced and clear.
- **UV Sanitisation is considered by some as the best form of cleaning technology!**
- **Ultra Fresh UV System** destroys over 99.5% of pool pathogens. UV disinfection is a fast and reliable method that has been proven effective against killing bacteria (e.g. fecal coliform, e. coli, enterococci), viruses (e.g. poliovirus) and parasites (e.g. Cryptosporidium and Giardia). It destroys micro-organisms which are resistant to chlorine, with zero harmful by products.
- **UV works in all weather conditions.** Our Ultra Fresh System will perform in Summer and Winter, with no changes due to weather conditions.
